

## 2000 Series Recliners

The future of passenger seating is here today with the new 2000 Series Recliners from American Seating. They are comfortable, durable and designed for ease of maintenance. Each features a rugged, modular frame with a variety of sculpted cushion and back packages to promote overall comfort for your passengers.

The 2000 Series Recliners set the pace for style, comfort and durability – all in a slim-line design to maximize hip-to-knee spacing.

## 2000 Series Recliner Is Available in Six Distinctive Styles

### Model 2000 Recliner

**Model 2000** creates a new standard in recliner seating, with seat and back cushion contours designed to comfortably accommodate a wide range of passengers. Paired with a contoured, adjustable headrest, the 2000 Recliner sets the new milestone for passenger seating comfort.

### Model 2003 Recliner

**Model 2003** has an S-shaped, contoured back that tapers towards the top of the recliner to allow better sight lines. Its one-piece back features an integrated headrest and is ergonomically designed to provide lumbar support for added passenger comfort.

### Model 2004 Recliner

**Model 2004** has an adjustable headrest and an S-shaped, contoured back that tapers toward the headrest for a more open coach feel. With more hip-to-knee room than any recliner in its class, its slim-line profile gives passengers added legroom.

### Model 2005 Recliner

**Model 2005** has a full width, S-shaped, contoured reclining back for an added measure of passenger privacy and exceptional comfort. These features make it a smart choice for suburban transit buses and private motorcoach use.

### Model 2006 Recliner

**Model 2006** has rounded styling lines and a fuller back for passenger privacy and comfort. It has a height adjustable headrest and our signature slim-line profile that allows passengers to stretch out and get comfortable – even when fully reclined.

### Model 2095 Recliner

Contoured seat and back cushion with a fuller back for passenger privacy, incorporates an integrated headrest.

A palm-shaped release handle on the standard armrest allows you to easily fold the arm down.

A convenient recline button puts back recline adjustment at your fingertips.

## Footrests

Choose from two footrests, the self-storing model or two-position model. Both provide added passenger comfort and are designed to support in excess of a 500-pound vertical load for safety.

### Self-Storing Footrest

To operate the self-storing footrest, simply press it toward the floor with your foot. It will gradually return itself to the stored position in a smooth, controlled movement when not in use.

### Two-Position Footrest

The two-position footrest also operates by pressing it from the stored position downward with your foot. It will remain there even if you remove your foot. To restore it, gently nudge it upwards with your foot.

## Cushions

Upholstered seat cushions are constructed of high density polyurethane foam for increased comfort and service life.

## Upholstery Packages

The 2000 Series Recliner family offers several different cushion and back packages. This allows you to tailor your vehicle interior to your needs while enjoying the benefits of the innovative modular frame design. Whether you seek to promote privacy or encourage passenger interaction, subtleties in contouring, shapes and widths can help achieve these goals. Choose from a range of popular upholstery fabrics in a spectrum of colors to complement any vehicle interior.

All materials used in the 2000 Series Recliners are tested to ensure long life and compliance with federal transportation safety standards, as well as our own uncompromising requirements.

## Frame

Add a footrest. Change to a different arm or even convert a right hand seat to a left hand one. The 2000 Series modular frame allows changes throughout seat life with minimum effort and maximum return on investment. Constructed of fatigue and corrosion-resistant powder coated steel, the 2000 Series Recliners are supported at the wall by heavy-gauge steel brackets and from the floor with an inverted T-pedestal. Other mounting options are available.

## Armrests

### Aisle Side Armrests

Choose from two different aisle side armrests, either our standard fold down armrest or the optional fold up armrest. Both feature a convenient fingertip recline button located on the end of the armrest where passengers naturally expect it. Effortless back recline adjustment is achieved with either armrest and there are an infinite number of stops within the 8" recline range. Comfortable to use, yet made of durable materials for a long life. Each armrest supports in excess of 500 pounds of vertical load and 250 pounds of horizontal load for durability and safety.

### Standard Fold-down Armrest

To operate the standard fold-down armrest, simply pull up on the palm shaped handle while rotating the armrest forward. To restore this armrest to the upright position, simply rotate it upwards and it will automatically lock into place. This armrest features an alternative, non-locking stop to facilitate cleaning.

### Optional Fold-up Armrest

An optional fold-up armrest is available on 2000 Series Recliners. For easy ingress and egress, simply lift this armrest upward until it stops automatically or fold it downward for active use. With no locks to release, this allows open access to the seat from the aisle.

The 2000 Series' standard fold-down arm is visually appealing as well as comfortable.

Seat cleaning and maintenance is effortless with the armrest situated in the alternate, non-locking position.

Selecting the below-seat-level storage position permits greater ease of access and movement.
